Applicants' remarks filed on June 28, 2010, have been carefully considered. No claims have been canceled or added; claims 7-10 and 14-18 remain pending in this application.

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Applicants' Priority Document was filed on July 20, 2005.

Withdrawn Rejection

The 103(a) rejection of claims 7-10 and 14-18 as being unpatentable over Japanese Patent No. 11-180902 in view of Friedrich (U. S. Patent No. 3,669,877), Miller et al. (U. S. Patent No. 4,340,465) and Suzukawa et al. (U. S. Patent No. 3,551,513), stated in the previous Office Action, has been withdrawn in view of Applicants' persuasive traversing arguments.

The combined teachings of the cited references do not teach or suggest the claimed invention. Namely, the Japanese Patent teaches a catalyst to hydrocarbon ratio that is far above the respectively claimed range of 18 to 40; Miller et al. teach a catalyst to hydrocarbon ratio of 2 to 15, which is far below Applicants' respectively claimed range. Combining these references' teachings would not obtain the claimed invention.

Declaration under 37 C.F.R. § 1.132

2. The Declaration under 37 CFR 1.132 filed January 25, 2010, was received after the previous Office Action was prepared by the Examiner. The Declaration includes a certified English translation of an excerpt from “Catalyst technology course 3 Catalyst equipment and its design”, and is greatly appreciated. Applicants’ attempt to show the difference between a fluidized catalyst bed and a fixed catalyst bed is greatly appreciated, but is deemed moot, as the rejection of record has been withdrawn.

Allowable Subject Matter

3. Claims 7-10 and 14-18 are allowed.

Reasons for Allowance

4. The following is an examiner’s statement of reasons for allowance:

As stated above, the combined teachings of the cited references do not teach or suggest the claimed invention. Namely, the Japanese Patent teaches a catalyst to hydrocarbon mass ratio that is far above the respectively claimed range of 18 to 40; Miller et al. teach a catalyst to hydrocarbon mass ratio of 2 to 15, which is far below Applicants’ respectively claimed range.

While the prior art teaches the production of light olefins via catalytically cracking a hydrocarbon feed in the presence of a crystalline aluminosilicate zeolite catalyst supporting a rare earth element, comparable to that instantly claimed, the prior art does not teach or suggest the claimed catalyst to hydrocarbon mass ratio of

2 to 15. Applicants' claimed catalyst to hydrocarbon mass ratio results in an increased amount of cracking products recovered from the olefin production process.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
